

About gloStream

Just the facts

Product profile

gloEMR™ and gloEMR modules:

gloVOICE™

gloDOCUMENTS™

gloFILMS™

gloOMR™

gloRX™

gloSYNC™

gloLINK™

Range of specialties

Orthopedics and Sports Medicine,
Cardiology, Family Practice,
Obstetrics/Gynecology, Neurology,
Urology, ENT, Gastroenterology,
Dermatology, Hematology,
Rheumatology, Plastic Surgery,
Pediatrics, Internal Medicine

Since early 2005, gloStream has been providing electronic medical records solutions to physician practices. gloEMR™, the company's flagship product, is a secure, easy-to-use solution designed to match the way physicians practice.

gloEMR™ delivers a broad range of clinical decision tools to the point of care. By design, gloEMR streamlines workflow with flexible, dynamic exam notes and the latest voice recognition technology. gloEMR also features one-click access to comprehensive patient data including charts, labs, prescriptions, diagnostics and more.

gloStream technology serves a wide variety of practices – single practitioners to larger multi-site group practices – regardless of specialty. As a 100-percent partner-driven company, our solutions are exclusively sold, integrated and supported by a nationwide network of partners. This strategy allows physicians and integrators to create the best total solution for their individual practice. By working closely with a local partner, a solution can be tailored to meet the unique requirements of any practice. Service is also close by so workflow at a practice is never interrupted.

Open and flexible

The drive to create and support the very best EMR platform on the market while providing an open framework for easily integrating solutions led gloStream to develop its Open Platform for Healthcare Information Technology (gloStream OPHIT™). gloStream OPHIT allows gloStream to form alliances and seamlessly integrate and inter-operate with best-of-breed industry solutions. OPHIT helps improve gloEMR with new features and functionality and the latest technology to enhance patient care.

gloStream is exclusively focused on creating and supporting the very best EMR platform on the market. Maintaining an open framework for integrating industry solutions also allows providers to combine gloEMR with other industry-best practice management and clinical decision support tools for a complete best-of-breed solution.

Forward-thinking

To shape EMR technology for the future, gloStream developed its Center of Excellence program, offering physician groups a unique opportunity to influence the direction of EMR development. Through this program, physician groups collaborate with gloStream executives and technologists to design product enhancements for maximum benefit from an EMR solution.

Background

gloStream was founded by two very experienced and innovative health informatics technologists with a gift for translating the needs of health care providers into useful technology.

Their mission: to work closely with key physicians, nurses, medical staff, practice managers and partners to create a user-friendly electronic medical record system (EMR) that improves patient care and enhances the efficiency of practices that use it.

Together with gloStream staff, gloStream's founders worked in partnership with industry professionals and a physician advisory board. They designed a robust, extensible platform that integrates and makes various forms of data available—from still images and static text to movies and voice recordings—in a flexible easy-to-understand dashboard environment.

The result of this collaborative effort is gloEMR™, a full-featured EMR that helps streamline workflow and maximize efficiency in office administration. Its simple user interface provides one-click access to all pertinent patient information at the point of care including charts, labs, history, diagnostics, prescription data and more.

gloEMR is supported globally because it is designed using the latest technology innovations, industry standards and the Microsoft® .NET Framework. Thanks to gloStream Liquid™ Technology, gloEMR easily adapts to the unique way physicians practice medicine and can be scaled for every size practice or specialty.

Recognizing the value of gloEMR to physician practices, Michael Sappington joined the company as CEO in 2006.

Although he was formally trained in accounting and finance, Mike's true passion is technology. He has participated in fast growing technology companies for more than 20 years with great success, playing pivotal roles from technologist to executive, entrepreneur to investor.

Early in his career he participated in developing large database solutions for underground oil and gas exploration. He later joined an Internet security provider and took part in pioneering and developing a platform for outsourced managed security. He led this company through astounding self-funded growth to a market-leading position until the company was purchased. After the acquisition, he became vice president of managed security services and was instrumental in setting and executing a global go-to-market strategy.

Since that time, Mike has been a technology investor while participating on several corporate and non-profit boards. With his broad business and technology background, Mike is well suited to lead gloStream to its next stage of development as an emerging healthcare informatics technology leader. In his role as gloStream CEO, Mike is responsible for developing and implementing business strategy and overseeing all aspects of operations for the company and its subsidiaries.
